Subject: GE Silicones HPV

Karen, thanks for returning my call. As we discussed, I would document 3 points in this e-mail:

* GE Silicones is meeting its HPV commitment through the Silicone Environmental Health and Safety Council (SEHSC) consortium

* GE Silicones has decided to fulfill its HPV Challenge commitment through the International Council of Chemical Associations (ICCA) Global Initiative on HPV Chemicals

* The Charles Auer letter of April 12, 2004 (sent to Dana Dalrymple) listed 16 chemicals. The 15 silanes/siloxanes are being addressed by the SEHSC. The one phosphorous compound (26401-27-4) was committed to by the former GE Specialty Chemicals division which has since been sold to Compton Corp..

Please call me if there any further questions. Thank you.
